ENVIRONMENTAL SCORECARD 2003/04

A Report on the Georgia General Assembly

Georgia Conservation Voters    

© 2004 GEORGIA CONSERVATION VOTERS.

ALL RIGHTS RESERVED.

The state of Georgia possesses beauty and natural resources in abundance.

Georgians need leaders who know that our air, water, land and wildlife make up a key element of our economy, and that our quality of life depends on protecting and enhancing the environment in which we live.

Georgia Conservation Voters (GCV) exists to accomplish three missions: to elect conservation-minded leaders to the General Assembly; to hold our elected officials accountable for how well they work to protect and restore Georgia's environment; and to educate both legislators and voters on environmental issues. GCV presents this 2003-04 LEGISLATIVE SCORECARD to provide objective and factual information about the votes of Georgia's legislators on conservation issues.

The votes included in this Scorecard cover a range of issues: water management, forestry, transportation, greenspace, the environment, and energy. The scorecard is intended to accurately and fairly reflect who is voting for conservation and who is not. Unfortunately, a scorecard can only evaluate votes that are cast. Because we lack meaningful and recorded legislative votes in some particular areas of conservation, we cannot adequately ascribe specific failures of the legislature to protect the environment to individual members of the General Assembly.

Therefore, it is important to recognize that this scorecard is only a test of a legislator's

environmental record, and reflects only one component of a legislator's overall commitment to conservation. Factors such as leadership, vision, behind-the-scenes activity or inactivity, and political party pressure on a legislator matter in ways difficult to quantify on a chart. GCV appreciates the efforts of all legislators who work on behalf of Georgia's citizens, but particularly applauds those who continue to show strong leadership and vision for Georgia's natural resources.

We encourage you to use this scorecard and join us in making environmental protection a top priority in Georgia.

SENATE

1 **SB 86: Development Rights**

Senate Bill 86, which won almost unanimous passage, was drawn up to encourage the preservation of environmentally sensitive areas and open lands. The bill relied on a legal device known as a “transferable development right” that lets local governments curb pressures to develop certain properties by allowing owners to sell their development rights for land to landholders in different, less sensitive locations. SB 86 streamlines the process of preserving greenspace by removing the requirement that each transfer be approved by a vote of a local government. SB 86 maintains public involvement and input for creating TDR ordinances that establish sending and receiving areas within a county. The bill passed the Senate 48-2.

YES was the pro-conservation vote.

2 **SB 127: Transportation Funding**

3 Written at first as a measure to change the
4 formula for distributing transportation funds among Georgia congressional districts, Senate Bill 127 gained greater environmental significance after two successful floor amendments. The first floor amendment, sponsored by Sen. Charlie Tanksley, opened the way to funding transportation projects aside from highways, including rail projects and inter-modal projects, under the bill’s new formula. The amendment passed narrowly by 26-23.

YES was the pro-conservation vote on the Tanksley Amendment.

The second amendment, brought to the floor by Sen. Chuck Clay, added the Metropolitan Atlanta Rapid Transit Association (MARTA) to the list of potential funding recipients. This measure passed by a similarly small margin of 27-23.

YES was the pro-conservation vote on the Clay Amendment.

The bill passed 37-13. ***On the final version of the bill, a YES was the pro-conservation vote.***

5 **SB 172: Restraint of Environmental Regulation**

6 An especially pernicious piece of legislation, Senate Bill 172 would have forced the Board of the Department of Natural Resources to write a so-called “statement of rationale” — including a detailed cost-benefit analysis — before adopting regulations under the state’s premiere environmental laws, including bills covering hazardous waste sites, vehicle emissions, asbestos, and radiation control.

Sen. Steve Thompson floated an amendment that would have empowered senior officials at the Department of Natural Resources and the Environmental Protection Division to limit the scope of any “statement of rationale” — a step that would have the incidental effect of limiting grounds for possible court challenges of new regulations. The amendment failed by a vote of 21-32.

YES was the pro-conservation vote on the Thompson Amendment.

The bill failed, with 42 votes against versus only 11 in favor. ***On the final version of Senate Bill 172, a NO is the pro-conservation vote.***

7 **HB 314: Greenspace Acquisition Funds**

Unfortunately, greenspace funding came under attack in 2003. All funds to purchase greenspace by the counties were removed from the state's budget for 2003 and 2004. In addition, HB 314 — the Georgia greenspace trust fund bill — directed all interest earned on the trust fund to the state's general fund. The version adopted by the House did not place a limit on the duration of the funds diversion; in the Senate, a floor amendment set the arrangement to lapse in July 2004. The Senate passed that amendment by a 42-11 vote.

YES is the pro-conservation vote on this amendment.

8 **SB 460: Stream Buffer Protection**

9 Senate Bill 460, by Sen. Casey Cagle, would
10 have created a general variance for streams
11 with annual average flow under 25 gallons a minute. A general variance (GV) is granted not by EPD but by a local issuing authority, and is automatically allowed when stream criteria are met. SB 460 would have seriously jeopardized the stability of all waters downstream from streams in which a GV was granted.

Sen. Sam Zamarripa's amendment would have removed the word "general" from the wording of the bill, reverting power to grant the variances in question back to EPD and ensuring that the process would not be automatic. The amendment first passed 28-27, and then failed 27-28 after reconsideration.

YES was the pro-conservation vote each time for the Zamarripa Amendment (Votes 8 and 9).

Sen. Steve Thompson's amendment made the criteria required to receive a general variance more stringent, in an attempt to ensure that water quality would be protected downstream. The amendment passed 29-27.

YES was the pro-conservation vote on the Thompson Amendment (Vote 10).

The bill passed — 21 opposed it, while 35 voted in favor. ***NO was the pro-conservation vote.***

12 **SB 568: Grease Dumping Ban Enforcement**

Illegal dumping of grease hurts taxpayers, businesses, and individuals who are forced to pick up the bill for expensive cleanups, and is the number one cause of sewer blockages in the state. SB 568 creates enforcement tools to curtail unscrupulous waste haulers who dump grease illegally. The bill passed the Senate 53-0.

YES was the pro-conservation vote.

13 **SB 361: Cost/Benefit Analysis**

Senate Bill 361, by Sen. Ross Tolleson, would have required that any state agency perform cost-benefit analyses, four-year reviews, and other scientific research on any rule or regulation that would affect small businesses (defined as any business with less than 50 employees and taking in less than \$4 million a year). These requirements would put inappropriate burdens of cost and labor on state regulatory agencies, and would eventually result in a reduction of safety, environmental, and consumer protections offered by the state. Twelve senators stood against the bill, but with 42 votes in its favor, the measure passed.

NO was the pro-conservation vote.

HOUSE

1 **HB 237: Privatization of Water Rights**

2 Described by the *Atlanta Journal-Constitution* as
3 “perhaps the most controversial environmen-
4 tal legislation in Georgia’s history,” House Bill
5 237 would have given corporations the right to buy, sell, and trade the water in Georgia’s rivers and underground through a “permit trading” scheme. As passed by the House, the bill would have allowed corporations, as well as private citizens, to earn profits on water rights the state had given them for free.

The debate over a statewide water plan lasted two years. Representative Bob Hanner introduced HB 237, purportedly in acknowledgement of the need for a statewide water plan. The bill sparked deep concern, however, thanks to a provision that would have established permit trading for Georgia’s water. There were also concerns related to unrestricted interbasin transfers within the 16 county metro Atlanta area, the lack of public participation in the establishment of a water plan, and the risk that planning might be based on geopolitical rather than watershed boundaries.

Rep. Buddy DeLoach almost succeeded with an effort to get rid of the permit trading provisions of the bill; supporters of HB 237 only fended his amendment off with a 14-vote margin. The amendment failed 77-91. **YES was the pro-conservation vote on the DeLoach Amendment (Vote 1).**

When the bill arrived on the House floor, Rep. Paul Smith introduced an amendment that would have limited efforts to transfer water from one river basin to another. House members defeated this amendment by a wide margin. The amendment failed 52-116. **YES was the pro-conservation vote on the Smith Amendment (Vote 2).**

The bill was overhauled by conservation-friendly lawmakers in the Senate, who wrote language that not only would have strictly controlled water transfers between river basins, but also have given the director of the Department of Natural Resources the power to take water rights away from permit holders who let them go unused through times of drought.

House members rejected the attempt by senators to undo the most environmentally offensive sections of the bill, insisting by a three-to-two margin on negotiating new language in a House-Senate conference committee instead of agreeing with the Senate’s language. The House failed to agree with the Senate version by a vote of 62-95. **YES was the pro-conservation vote on the motion to agree with the Senate (Vote 3).**

Heavy lobbying by conservationists, along with allies in the Senate, turned the tide in the House. Representatives rejected the conference committee report in two separate votes in the session’s final hour, defeating water permit trading. The first vote was 105 against with 60 for, and the vote to reconsider was 98 against and 61 for. **NO was the pro-conservation vote on the conference committee report (Votes 4 and 5).**

6 HB 285: Erosion and Sedimentation

House Bill 285, the Erosion and Sedimentation Bill, evolved out of much input, work and compromise from a variety of stakeholders, including homebuilders, government agencies, contractors, businesses, utilities and environmentalists. The bill revises the state's erosion and sedimentation control program, calling called for more comprehensive enforcement of anti-erosion laws by local authorities while requiring a permit fee of \$80 per acre of disturbed land, half of which would fund local enforcers. In addition, the bill replaces fines with more effective mandatory stop-work orders for enforcement. Finally, it mandates the creation of an education and trading program designed to improve compliance with state and federal law. With this legislation, Georgia's waters now enjoy new protection from unchecked erosion.

The bill sailed through the House with a vote of 168-3. **YES was the pro-conservation vote on HB 285.**

7 HB 260: Forster Amendment

It seems that each session of the legislature features some version of a bill to let all-terrain vehicles (ATVs) be used on roads. These vehicles are often ridden illegally through private property and can quickly destroy streams, unpaved roads and rights of way, and natural ground cover. The latest attempt to legalize road use of ATVs came in the form of HB 260, which proposed allowing ATVs on unpaved roads in state and national parkland. A heavy lobbying effort by concerned citizens kept the bill bottled up in the House Rules Committee. Unfortunately, Rep. Ron Forster attempted, by way of an amendment he proposed in the midst of debate of an unrelated Senate bill, to allow drivers to use all-terrain vehicles (ATVs) in state and national parks. After spirited arguments against the measure, it went down in defeat, with 98 opponents versus only 70 in favor. **NO was the pro-conservation vote on the Forster Amendment.**

8 HB 373: Power Transmission Line Construction

Sponsored by Rep. Ralph Twiggs, House Bill 373 addressed the issue of power companies' use of the right of eminent domain to squelch citizen disagreement with their decisions on locating power lines. The language of the bill required companies to seek a certificate of need from the state, which they could only acquire by appearing in a public forum to establish the need for the project.

Rep. Wendell Willard proposed two amendments when the bill arrived on the House floor. The first would have eliminated some of the loopholes of the bill's language: an exemption for lines less than a mile long, for instance, and an exemption for lines in planning by mid-2003. The second amendment eliminated language that would have removed an obstacle to power companies' exercise of the right of eminent domain. The first amendment failed by a vote of 43-126, as did the second by 44-123. **YES was the pro-conservation vote on both Willard amendments.**

10 HB 1277: Automatic Irrigation System Shutoff

Rep. Karla Drenner's HB 1277 requires that irrigation systems installed in the Metropolitan North Georgia Water Planning District with an electronic controller must have an automatic rain sensor shut-off switch, which will shut the system down once a predetermined amount of rain has fallen. The bill passed the House 142-31. **YES was the pro-conservation vote.**

11 HB 1083: Smith Amendment

Rep. Paul Smith proposed an amendment that would have prohibited new solid waste landfills from being located within one half-mile of a stream. The amendment failed, 49-119. **YES was the pro-conservation vote.**

**12 HR 1256: National Preserve Resolution**

House Resolution 1256 acknowledged the valuable natural resources in central and southern Georgia, and urged the United States Congress to create a national preserve to protect the land and other natural resources in a continuous corridor of the Ocmulgee and Altamaha rivers. The resolution passed the House 105-65. ***YES was the pro-conservation vote.***

13 HB 1408: Grease Dumping Ban Enforcement

Illegal dumping of grease hurts taxpayers, businesses, and individuals who are forced to pick up the bill for expensive cleanups, and is the number one cause of sewer blockages in the state. HB 1408 creates enforcement tools to curtail unscrupulous waste haulers who dump grease illegally. The bill passed the House 152-18. ***YES was the pro-conservation vote.***

14 HB 1615: Inter- and Intra-basin Water Transfers

15 House Bill 1615, a problematic bill introduced by Rep. Tom McCall, attempted to regulate inter- and intra-basin transfers of water throughout Georgia. While the conservation community favors restrictions on inter- and intra-basin transfers, HB 1615 had a fatal flaw: an exemption for the 16-county Atlanta metropolitan area.

Rep. Debbie Buckner's amendment added a sunset clause to the bill, in order to render HB 1615 powerless once the legislature adopts a statewide water plan. The amendment passed 88-79. ***YES was the pro-conservation vote.***

Rep. Chip Rogers' amendment added a prohibition against *any* new transfers from the Etowah and Alatoona rivers, noting that water supply there has already become so precarious that residents must boil their drinking water during the summer. The amendment passed 88-82. ***YES was the pro-conservation vote.***
